

FLOORING FACTS

BENEFITS OF SWITCHING FROM VCT TO LVT EXPLAINED

VCT (Vinyl Composition Tile) and LVT (Luxury Vinyl Tile) are both popular choices for commercial and residential flooring. Here are some reasons why someone might consider switching from VCT to LVT:

- **DURABILITY:** LVT is more durable than VCT and can withstand heavy foot traffic, spills, and scratches better than VCT.
- **INSTALLATION:** LVT is easier to install than VCT because it can be installed with a click-and-lock system or adhesive. VCT requires glue-down installation and can be time-consuming.
- **DESIGN OPTIONS:** LVT offers more design options than VCT. LVT can mimic the look of natural materials such as wood or stone, whereas VCT typically only comes in solid colors.
- **MAINTAINANCE:** LVT is easier to maintain than VCT. It requires less frequent cleaning and can be cleaned with a damp mop, whereas VCT requires regular waxing and polishing.
- **COMFORT:** LVT is softer and more comfortable underfoot than VCT, making it a better choice for areas where people will be standing for long periods.

OVERALL, LVT IS A MORE MODERN, VERSATILE, AND LOW-MAINTENANCE OPTION THAN VCT.
